Log - sheet note worthy information <>

Our net opening and closing as well as the log sheet with the session's message,
Included at the bottom of the page, is basically a simple guide that conforms to the
accepted ARRL standard and is a good general guide. Anyone seeking more formal
and extensive information can inquire through the ARRL or an experienced traffic handler.

QNI <> is the total number of stations checking in--counting
        net control as no.1 on the log sheet etc.
QTC <> is the number of messages passed for that session.

As per the ARRL procedure, each net control station operator, when keeping a log
of net check-in's and messages, shall start each January 1st, with message number 1
No two messages for that year shall be assigned the same number. The reason is to be
able to identify and recall, if necessary, a particular message, at any future time. Although,
it is unlikely that our informal messages would be recalled for any reason.
